# Preface

This book is about the Nimzo-Indian Classical line 4.♔c2 (also known as the Capablanca Variation) and the 4.♙d2-line, for which basically I could not find an established name.

As far as I know, the 4.♙d2 line has never been covered in such a comprehensive way in any book before. In the text I suggest that this line should have the combined name of Tartakower-Duchamp line because Savielly Tartakower played it often, while to my surprise Marcel Duchamp (who was also a famous French artist) played it too in the 1930s and indeed in a very good positional fashion against strong players. Some of those games are in the book.

Now this line enjoys greater popularity than ever before. About the Classical line with 4.♔c2 there is nothing much to add, except for the fact that it has become hugely popular, but unfortunately from my point of view it involves too much engine-style chess.

Position after: 4. ♙d2

This line has been completely neglected over the last 100 years or so, which is amazing. White is simply ready to take back with a bishop on c3 and that is a clear positional idea. Only in recent years, when players started to seriously investigate all kinds of positions, mostly in less explored variations, in order to avoid forced engine lines, did this line rise to the surface. I could not even find a name for this line, so my suggestion is to call it the Tartakower-Duchamp line. Why? While searching and analyzing many games I discovered that the renowned artist and passionate chess player Marcel Duchamp actually played this line. His games with Znosko-Borovsky from Nice 1930 and 1931 do have a place in modern theory and strategy, and that is quite an accomplishment. As for Tartakower, he was playing it on a regular basis, at least more than other famous players. I want

to emphasize that this is probably the first time this line has appeared in a chess book covered in detail, and it is also one of two main systems presented in this book. That is something that I am proud of.

It should be noted here that in practice the ♙d2 lines most often arise after 4.e3, when White moves the bishop to d2 within the next few moves.

We will deal here with early deviations for White, meaning ideas different from 7. ♖c1 or 7.cxd5 followed by ♙d3.

bishop to. 10. ♖e2 ♘bd7 11. 0-0 e5  
12. h3 ♜e8 13. ♚c2 e4 14. ♘h2 ♘f8  
A good plan for Black, 0-1 (36) Besciu,

8... a6 9. ♖d3 ♖b7 10. cxd5 exd5 11.  
0-0 ♘bd7

Position after: 11... ♘bd7

This is not a favorable version of the Nimzo; the bishop on d2 is misplaced now and the e5-square is out of reach for the knight on f3. White must do something, otherwise it's one-way traffic.

12. ♘h4!?

White needed to generate some activity.

12. ♘e2?! ♚e7 13. ♘g3 g6 14. ♖b4 c5  
15. dxc5 bxc5 16. ♖c3 ♜fd8 17. ♜e1

12... ♜e8 13. f4 c5 14. ♜f3

Position after: 14. ♜f3

14... g6 15. ♜h3

With the black knight on d7 instead of c6, White need not worry about pressure on his d4-pawn. So now the plan is for the h4-knight to go back to f3 and then to e5, with unclear play.

## b) 7.cxd5

Position after: 8. Bd3

White wants to transpose to a main Nimzo line, as we will see later, but Black has alternatives here apart from the standard placement of the bishop on b7.

8... Ba6

The main alternative to the fianchetto. The idea is clear: by exchanging this bishop Black practically eliminates White's usual attacking plan and the game now is more positional; it's more about playing in the center. We will see that often we get a slower type of game with lots of maneuvering.

A) 8... c5 9. 0-0

Position after: 9. 0-0

A1) 9... Bb7 This transposes to another line, which is discussed under the ...Bb7 system.

A2) 9... Bxc3 10. Bxc3 c4 11. Bc2 b5 12. a4! White is better.

A3) 9... Bg4 10. h3 Bh5 11. dxc5 bxc5 12. a3 Ba5 13. g4 Bg6 14. Bxg6 hxg6

15. Nxd5! White has an edge.

A4) 9... Nc6 10. a3 Ba5 11. Bb5!?

Position after: 11. ♖b5!?

White exploits the moment when the black bishop is on a5. 11... ♖b7 12. ♖xc6 ♖xc6 13. ♘e5 ♖e8 14. f3 ♖c8 15. ♖e1! It seems White has potential for an advantage.
